■ Alphawise: Slide-by-Slide PPT Pitch Script

Official Spoken Teleprompter Companion for Alphawise_Pitch_Deck.pptx

Deck File: Alphawise_Pitch_Deck.pptx | **Total Slides:** 8 Slides | **Target Duration:** 2:50 – 3:00 Minutes

■■ HOW TO USE THIS SCRIPT WHILE PRESENTING THE PPT:
1. Open **Alphawise_Pitch_Deck.pptx** in PowerPoint and press **F5** (Full Screen) or **Alt + F5** (Presenter View).
2. Keep this PDF document on a second monitor, tablet, or split screen as your verbatim teleprompter.
3. Advance one slide at each timestamp marker. The script is timed to complete cleanly in under 3 minutes.

Part 1: The Hook, Problem, Solution & Mathematical Rigor (0:00 – 1:45)

SLIDE & TIME	ON-SCREEN CONTENT & VISUALS	VERBATIM SPOKEN SCRIPT (READ THIS OUT LOUD)
Slide 1 **0:00 – 0:20** **(20 sec)**	**HERO COVER SLIDE** • Title: ALPHAWISE • Emerald Top Accent Bar • Subtitle: Institutional Quantitative Engine & AI Portfolio Intelligence • Live URL: alphawise-frontend.vercel.app	"Good day, judges and investors. I am excited to present **Alphawise**—an institutional-grade portfolio optimization and risk intelligence platform that bridges quantitative financial rigor with real-time AI diagnostics. Our platform is live right now at **alphawise-frontend.vercel.app**. Let's dive into why this matters."
Slide 2 **0:20 – 0:50** **(30 sec)**	**THE MARKET PROBLEM** • Card 1: Fake Diversification (The Ticker Fallacy) • Card 2: The 'Error Maximizer' (Markowitz Flaw) • Card 3: The Institutional Gap ($25k/yr Terminals)	"Here is the critical blindspot in financial markets today: Over 70% of investors believe owning 10 stocks protects them. But if 7 of those stocks are Nvidia, Apple, Microsoft, and tech ETFs, they don't have 10 bets—**they have 1 giant bet on the exact same risk factor**. When interest rate spikes hit, correlations approach 1.0, and portfolios suffer 30%+ drawdowns. Meanwhile, raw Markowitz models overfit to noise, and institutional tools cost $25,000 a year. **Alphawise solves all three problems.**"
Slide 3 **0:50 – 1:20** **(30 sec)**	**THE ALPHAWISE SOLUTION** • Pillar 1: Robust Quant Solvers (Convex QP & Ledoit-Wolf Shrinkage) • Pillar 2: Spectral Risk Engine (Effective Bets Neff) • Pillar 3: AI CIO Diagnostics (Dual-Persona Llama 3.3 70B)	"Alphawise rests on three foundational pillars: **First:** Robust convex quadratic solvers with Ledoit-Wolf shrinkage covariance to calculate the true tangency portfolio without extreme corner weights. **Second:** A spectral risk engine that decomposes correlation eigenvalues into your true **Effective Number of Bets**. **And third:** An AI CIO Hub that translates complex mathematics into executive fiduciary memos and viral educational roasts in real time."
Slide 4 **1:20 – 1:45** **(25 sec)**	**UNDER THE HOOD: MATH RIGOR** • Card 1: Charnes-Cooper Tangency Formulation (min_w - (w^T μ - Rf) / σp) • Card 2: Spectral Eigenvalue Shannon Entropy (Neff = exp(-Σ pk ln pk)) & Cornish-Fisher VaR 95%	"For our technical evaluators: our engine applies the Charnes-Cooper hyperbolic transformation to solve the non-linear Maximum Sharpe problem as a convex quadratic program via SciPy SLSQP and CVXPY. We decompose the Pearson correlation matrix into orthogonal eigenvectors and compute Shannon entropy, mathematically proving how many independent risk factors actually exist in your portfolio. This is institutional quantitative science running in sub-second speeds."

Part 2: Product Panes, Execution, Business Model & Vision (1:45 – 3:00)

SLIDE & TIME	ON-SCREEN CONTENT & VISUALS	VERBATIM SPOKEN SCRIPT (READ THIS OUT LOUD)
Slide 5 **1:45 – 2:10** **(25 sec)**	**PRODUCT CAPABILITIES: 6 PANES** • Pane 1: Efficient Frontier (Tangency Star) • Pane 2: Crisis Stress-Test (+8.4% Cushion) • Pane 3: What-If Sandbox (Marginal Deltas) • Pane 4: Correlation Matrix Heatmap • Pane 5: Asset Volatility Bar Chart • Pane 6: 63-Day Rolling Realized Volatility	"On screen, Alphawise provides 6 interactive visual panes: From the **Efficient Frontier** curve highlighting the tangency star, to our **Crisis Stress-Test** that replays 2020 COVID and 2008 Lehman shocks—proving our allocation provides an **8.4% downside capital cushion**. Users also get an interactive **What-If Sandbox** to test injecting Gold or Treasuries, and a **63-day rolling volatility tracker** proving persistent risk dampening over time."
Slide 6 **2:10 – 2:30** **(20 sec)**	**EXECUTION & AI INTELLIGENCE** • Broker Rebalance Ticket (Trade Deltas Δw) • ■ 1-Click 'Copy Trade Ticket' • State-Aware Floating AI Copilot • ■ BlackRock 1-Page PDF Tear Sheet	"Alphawise doesn't just show charts—it drives trade execution. Our **Rebalance Ticket** calculates broker-ready trade deltas (Δw) with 1-click clipboard copy. Our floating **AI Copilot** maintains continuous state awareness of portfolio covariance, answering risk questions instantly. And **Export Tear Sheet** generates a BlackRock-style 1-page PDF client report on demand."
Slide 7 **2:30 – 2:45** **(15 sec)**	**BUSINESS MODEL & TAM** • TAM: 300k+ RIAs & 100M+ Retail Investors • Competitive Moat: 100x lower cost vs Bloomberg; far deeper math than Robinhood • Monetization: Free Tier, $49/mo Advisor Pro, Enterprise Quant API	"The market opportunity is massive: over 300,000 independent wealth advisors managing $120 Trillion and 100 million active investors need this intelligence. With an Advisor SaaS tier at $49 a month and an enterprise API, we offer a 100x cost advantage over legacy terminals while delivering far deeper mathematical rigor than retail brokerage apps."
Slide 8 **2:45 – 3:00** **(15 sec)**	**CONCLUSION & VISION** • Headline: Smarter Portfolios. True Diversification. • Live URL: alphawise-frontend.vercel.app • GitHub: niranjangowdakm423-gif/Alphawise	"In conclusion: Alphawise replaces guesswork and estimation error with proven quantitative science, spectral factor analytics, and real-time AI intelligence. We are democratizing institutional-grade portfolio intelligence for the entire world. Thank you, and we welcome your questions!"

■ Presentation Tips for Recording the Video with PPT

• **Widescreen Display:** The presentation is built in 16:9 widescreen format (1920x1080), matching modern video standards.
• **Transition Cue:** Change slides as soon as you start the first sentence of each slide block.
• **Eye Contact:** If recording with webcam overlay in the corner, position your script window right below your camera so your eyes naturally stay looking forward.
